ChUI Lab Assignment
by Tan Jye How, Jonathan, A0110664N, SUN 3

Homepage: *index.html*

Description:
This is a simple movie review browser that was created using Chocolate Chip UI, wrapped with Bootstrap and jQuery. Design inspiration is taken from mobile-patterns.com. The app provides for the smooth navigation animation provided by Chocolate Chip UI, and is heavily skinned on CSS. Buttons are kept large for easy interactions for the calls to action. The table below describes the pages of the app and the functions each of the pages serve:

Page	Function
Landing <article id="main">	Show description of app. Allows user to proceed to main application Access Menu
Local Films <article id="content>	Lists the categories (not functional, aesthetics only) View featured movie review (carousel items) Access Menu
Menu <article id="settings">	Provides dark theme for night reading (Night Mode) Exit back to Landing
Movie Details <article id="movie">	View Movie Information View Movie Reviews Write Movie Reviews Give Ratings

UI Component	Location
Switch Button	index.html (48-50) js/main.js (46-63)
Range Button	index.html (157-158) js/main.js (41-44)
Back Button	index.html (41, 126)
Popup	js/main.js (25-34)

Extra Notes:
All files that are required for the app to run are already in the folder. Be sure to be using an active internet connection for all assets and effects to work due to the use of CDNs. Writing a review should include scoring as well for the Average Rating function to work properly. All data is obtained from IMDB. Category placeholders are intended to be clickable but are not functional.
